

Datasheet for ABIN987897 GRO gamma Protein

Overview

Quantity:	1 mg
Target:	GRO gamma
Origin:	Human
Source:	Escherichia coli (E. coli)
Biological Activity:	Active
Product Details	
Sequence:	ASVVTELRCQ CLQTLQGIHL KNIQSVNVRS PGPHCAQTEV IATLKNGKKA CLNPASPMVQ KIIEKILNKG ST
Characteristics:	Fully biologically active when compared to standard. The ED50 determined by a chemotaxis bioassay using human CXCR2 transfected human 293 cells is less than 100 ng/ml, corresponding to a specific activity of >, 1.0 × 104 IU/mg.
Purity:	> 97 % by SDS-PAGE and HPLC analyses.
Endotoxin Level:	Level Less than 1EU/µg of rHuGRO-gamma/CXCL3 as determined by LAL method
Target Details	
Target:	GRO gamma
Alternative Name:	GRO-gamma/CXCL3 (GRO gamma Products)
Background:	The three GRO cDNAs encode 107 amino acid precursor proteins from which the N-terminal 34

Background: The three GRO cDNAs encode 107 amino acid precursor proteins from which the N-terminal 34 amino acid residues are cleaved to generate the mature GROs. There are no potential N-linked glycosylation sites in the amino acid sequences. GRO expression is inducible by serum or PDGF

Target Details

and/or by a variety of inflammatory mediators, such as IL-1 and TNF, in monocytes, fibroblasts,
melanocytes and epithelial cells. In certain tumor cell lines, GRO is expressed
constitutively. Similar to other alpha chemokines, the three GRO proteins are potent neutrophil
attractants and activators. In addition, these chemokines are also active toward basophils. All
three GROs can bind with high affinity to the IL-8 receptor type B. Synonym: GRO-
gamma/CXCL3, Human. Formulation: Lyophilized from a 0.2µm filtered concentrated solution
in 20mM PB, pH 7.4, 50mM NaCl.
7.9 kDa, a single non-glycosylated polypeptide chain containing 73 amino acids.
