

## Datasheet for ABIN988185 Oncostatin M Protein (OSM)

Publication

## Overview

1

Quantity:	10 µg
Target:	Oncostatin M (OSM)
Origin:	Human
Source:	Escherichia coli (E. coli)
Biological Activity:	Active
Product Details	
Sequence:	MAAIGSCSKE YRVLLGQLQK QTDLMQDTSR LLDPYIRIQG LDVPKLREHC RERPGAFPSE
	ETLRGLGRRG FLQTLNATLG CVLHRLADLE QRLPKAQDLE RSGLNIEDLE KLQMARPNIL
	GLRNNIYCMA QLLDNSDTAE PTKAGRGASQ PPTPTPASDA FQRKLEGCRF LHGYHRFMHS
	VGRVFSKWGE SPNRSRRHSP HQALRKGVRR TRPSRKGKRL MTRGQLP
Characteristics:	Fully biologically active when compared to the standard. The ED50 as determined by the dose-
	dependent stimulation of the proliferation of human TF-1 cells is < 2ng/ml, corresponding to a
	specific activity of >5.0×105 units/mg.
Purity:	> 95 % by SDS-PAGE and HPLC analyses.
Endotoxin Level:	Level Less than 1EU/µg of rHuOSM(227a.a.) as determined by LAL method
Target Details	
Target:	Oncostatin M (OSM)
Alternative Name:	Oncostatin-M (OSM) (OSM Products)
Background:	Oncostatin M (OSM) is a growth and differentiation factor that participates in the regulation of

	neurogenesis, osteogenesis and hematopoiesis. Produced by activated T cells, monocytes and
	Kaposi's sarcoma cells, OSH can exert both stimulatory and inhibitory effects on cell
	proliferation. It stimulates the proliferation of fibroblasts, smooth muscle cells and Kaposi's
	sarcoma cells, but, inhibits the growth of some normal and tumor cell lines. It also promotes
	cytokine release (e.g. IL-6, GM-CSF and G-CSF) from endothelial cells, and enhances the
	expression of low-density lipoprotein receptor in hepatoma cells. OSM share several structural
	and functional characteristics with LIF, IL-6, and CNTF. Human OSM is active on mouse cells.
	Synonym: Oncostatin-M (OSM)(227a.a.) , Human. Formulation: Lyophilized from a 0.2µm
	filtered concentrated solution in PBS, pH 7.4.
Molecular Weight:	Approximately 26.0 kDa, a single non-glycosylated polypeptide chain containing 227 amino
	acids.
Pathways:	JAK-STAT Signaling, Negative Regulation of Hormone Secretion
Application Details	
Restrictions:	For Research Use only
Handling	
Format:	Lyophilized
Reconstitution:	We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the
	bottom. Reconstitute in sterile distilled water or aqueous buffer containing 0.1% BSA to a
	concentration of 0.1-1.0 mg/mL. Stock solutions should be apportioned into working aliquots
	and stored at < -20°C. Further dilutions should be made in appropriate buffered solutions.
Storage:	4 °C
